

Signaling Pathways for Translation

Filesize: 4.1 MB

Reviews

This kind of pdf is every little thing and taught me to looking forward and more. It is one of the most incredible book i have read. You wont truly feel monotony at whenever you want of your time (that's what catalogs are for about should you check with me).

SIGNALING PATHWAYS FOR TRANSLATION

To download **Signaling Pathways for Translation** eBook, please access the hyperlink under and save the document or have accessibility to additional information which are relevant to SIGNALING PATHWAYS FOR TRANSLATION book.

Book Condition: New. Publisher/Verlag: Springer, Berlin | Insulin and Nutrients | The articles in the present volume are by major contributors to our understanding of signaling pathways affecting protein synthesis. They focus primarily on two extracellular anabolic signals, although others are included as well. Insulin is one of the best-studied extracellular regulators of protein synthesis. Several of the known pathways for regulation of protein synthesis were elucidated using insulin-dependent systems. Regulation of protein synthesis by amino acids, by contrast, is an emerging field that has recently received a great deal of attention. The dual role of amino acids as substrates for protein synthesis and regulators of the overall process has only recently been recognized. Since amino acids serve as precursors for proteins, one might expect that withholding an essential amino acid would inhibit the elongation phase. Surprisingly, research has shown that it is the initiation phase of protein synthesis that is restricted during amino acid starvation. Understanding the mechanisms by which the biosynthesis of proteins is regulated is important for several reasons. Protein synthesis consumes a major portion of the cellular ATP that is generated. Therefore, small changes in protein synthesis can have great consequences for cellular energy metabolism. Translation is also a major site for control of gene expression, since messenger RNAs differ widely in translational efficiency, and changes to the protein synthesis machinery can differentially affect recruitment of individual mRNAs. | Insulin Signaling and the Control of PHAS-I Phosphorylation.- 1 Introduction.- 2 Mechanism of Translational Repression.- 3 PHAS Isoforms.- 4 Phosphorylation Sites in PHAS-I.- 4.1 Identification of Sites.- 4.2 Influence of Phosphorylation on the Electrophoretic Mobility of PHAS-I.- 4.3 Sites Involved in the Control of eIF4E Binding.- 4.4 Potential Mechanisms of Ordered Phosphorylation.- 5 Protein Kinases That Phosphorylate PHAS-I in...
