Brand New Book \*\*\*\*\* Print on Demand \*\*\*\*\*.Excerpt from A Text-Book of Experimental Chemistry (With Descriptive Notes) For Students of General Inorganic Chemistry While no particular claim to originality is made for this text-book, as many of the experiments have been described previously, yet the writer believes that the book will be found to be something more than a mere compilation. It grew originally out of a personal demand for a textbook which would embody: (a) a clear, accurate and comprehensive presentation of the fundamentals of the science; (b) specific directions for laboratory work, coupled with such questions as lead the student to observe, compare and generalize, and would therefore provide a method for the scientific development of the principles under discussion; (c) a sufficient amount of discussion and application of the principles involved in the experiments to foster the interest and to direct the observations that energy may not be spent indiscriminately, and (d) those physico-chemical generalizations which are essential to the explanation of much of the phenomena of inorganic chemistry. This book represents an endeavor to meet these requirements. It is not intended that it shall take the place of a large descriptive work or the instruction of the teacher; on the contrary, it is designed to provide, primarily, an experimental course in general chemistry, and by the use of descriptive notes and questions vitally relate it to the lecture-room work. It is scarcely necessary to emphasize the importance of laboratory work as being essential to a thorough comprehension of the subject; but this same work has a very doubtful value unless it is carefully directed and correlated with the lecture and text-book. It must not be merely a mechanical part of...
