Excerpt: . . . or plastic component) curves for different a W ratios would be in constant ratio to each other. The curves in figure 4 for a W P ratio of 0. 4 and 0. 5 in figure 4 show such a trend. Hence, p can be found. However, the curves for a W 0. 3 do not show such a trend and the curv for a W 0. 3 falls in a transition region. Therefore, a new plastic eta-factor needs to be defined which would be valid for b0t deep and shallow cracks. Consider the load P as a product of two functions. One depends on crack length and deformation; the second is independent of crack length but depends on other configuration parameters and deformation. Therefore, P F (b W, d1L) H (dIL, B W, . . .) (7) Then, one can show that a (b w) P F-8 (b W) (8...
